

KCA TOOL BOX TALK: Head Protection

The hard hat is one of the oldest, most widely used, and most important pieces of personal protective equipment (PPE) on the job. However, the hard hat is not able to do its job when it is not properly worn, maintained, and replaced when needed.

Warnings and Precautions:

- Never alter or modify the hard hat shell or suspension. This can drastically reduce the amount of protection provided.
- Never drill holes in the hard hat shell for ventilation purposes.
- Always wear your hardhat with the bill facing forward. Certification by ANSI does not cover hardhats worn backwards.
- Always avoid contact between the hard hat and electric wires.
- Never use a hardhat suspension that is not intended for use with a particular shell, or one that is made by a different manufacturer.
- Never carry or wear anything inside of your hard hat between the suspension and the shell. A clearance must be maintained between the hard hat shell and the wearer's head for the protection system to work properly. A ball cap or other object may limit this clearance and shouldn't be worn.
- Only wear products, such as winter liners and sunshades that are designed specifically to work in conjunction with hard hats. Be sure to follow the manufacturer's recommendations for use.
