

KCA TOOL BOX TALK: *Avoiding Mercury Exposure from Fluorescent Bulbs.*

Metallic mercury poses health risks from inhalation and skin exposure. Tubular or compact fluorescent bulbs contain small amounts of the metal mercury sealed inside. If fluorescent bulbs are broken, small amounts of mercury will be released into the environment. Proper cleanup will reduce workers' exposure to the low levels of mercury anticipated when a fluorescent bulb is accidentally broken.

Exposure, health effects, and symptoms:

- Workers can be exposed by breathing mercury vapor in the air and skin contact with mercury.
- Signs of mercury poisoning include tremors, mood/memory/coordination changes, and skin irritation/allergy.

Preventing accidental breakage and safe cleanup of broken bulbs:

- Handle bulbs carefully and store away from workers.
- Package bulbs in a sturdy container to prevent breakage.
- Label containers of fluorescent bulbs.
- Notify workers and tell them to stay away from the contaminated area.
- Open any windows and doors to air out the room.
- Do not use a broom or vacuum cleaner unless the vacuum cleaner is specifically designed to collect mercury.
- Wear appropriate disposable chemical-resistant gloves.
- Use a commercial mercury spill kit if available, or scoop up pieces of glass and powder with stiff paper or cardboard to avoid contact with the broken glass.
- Use sticky tape to pick up any remaining pieces of glass.
- Wipe down hard floors with a damp paper towel.
- Place all pieces of glass and cleanup materials in a sealable plastic bag or a glass jar with a lid.
- Wash your hands thoroughly after cleanup.
- Follow EPA and state government regulations for disposal of fluorescent bulbs and mercury-contaminated waste.
