Getting on and off equipment can lead to accidents ranging from sprains, cuts, bruises, fractures and even death.

***Here is an Example:*** Joe was an operator of a front-end loader. He went to climb down from the cab and lost his footing on the steps. Joe fell to the ground and sprained his ankle.

1. How could this accident have been avoided?
2. Have you ever experienced an accident similar to this at your worksite?

## Getting On and Off Equipment:

- Face the equipment and maintain three-point contact when descending.
- Wear shoes that will provide support and traction
- Set the parking brake to prevent the equipment from moving.
- Keep areas clean and free of debris.
- Inspect the steps for mud or other conditions that will make the footing slippery.

For more information visit OSHA Standard 1926.600, 1926.20
